

# FLEXSTAND TestView

Design Concept

Prototype Verification

Deploy Production

## LOOKING FOR A SOLUTION TO MONITOR YOUR DEVICES FROM A DISTANCE?

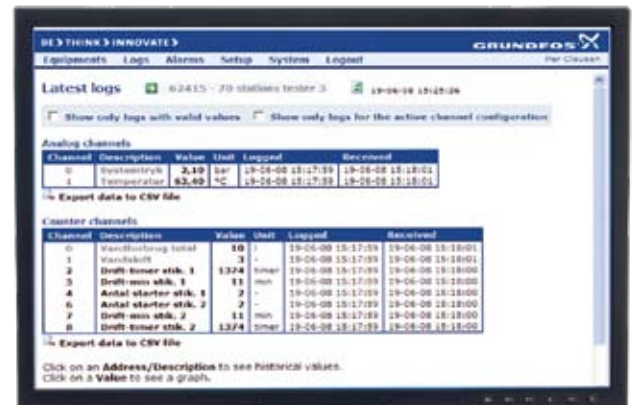

FlexStand TestView might be the turnkey solution you have been waiting for. A web-based system designed to give you a general overview and alarms from devices of all kinds, it gives you remote access to your devices.

The software and user interface of [FlexStand TestView](#) makes your machine-to-machine communication easy. It is designed for ultimate control when developing and deploying new devices in the field. And you can sleep well at night, because of its proven reliability and outstanding usability.

[FlexStand TestView](#) is a turnkey solution ready for immediate incorporation into your devices and gives you remote control of your devices. The system is fully scalable, allowing you to add more functions and features as you need them.

[FlexStand TestView](#) is a web service built on your SQL database. It works 24/7/365 and gives you complete control of all functions and access to all data when developing or operating from a distance.

Communicating via webservice, xml interface, TCP/IP, serial, USB or other communication protocols and interfaces, our API is simple and makes it easy for you web-enabled your devices to be controlled via web-browser. You can also receive alarms and advanced notices via e-mail or sms on your mobile phone (mobile datalogging).

- Integration to your device
- Machine to Machine interface (M2M)
- Software web based
- Alarm and logging
- Graphing and overview
- User management

Notice: Grundfos chose FlexStand TestView to monitor remote pump stations all over the world. The solution makes testing faster, easier and 100% valid.

Out of the box monitoring  
and control application for your devices
